

HexiCrete™ PC 350

PERVIOUS CONCRETE ADDITIVE

HEXICRETE™

Concrete Additives

HexiCrete™ pervious concrete (PC) 350 is a proprietary admixture for pervious concrete mix designs, which provides increased compressive strength and improved workability. The addition of HexiCrete PC 350 enhances the bond (or tack) between the cement paste and aggregate, creating additional strength while optimizing the void structure for quick drainage.

Save Time and Labor

Pervious concrete projects can be complex and labor intensive. The amount of water and cement in the mix must be carefully controlled to coat and bind the aggregate material properly. HexiCrete PC 350's unique properties allow for better distribution and flow of the cement paste around aggregate, less water content sensitivity, and fewer surface flaws such as premature raveling.

Due to HexiCrete PC 350's improved distribution of the cement paste, in conjunction with its curing properties, it can provide significant benefits during installation. Typically, plastic sheeting has been a prerequisite during curing of pervious concrete pavements to ensure structural integrity. With HexiCrete PC 350, combined with a HexiCrete Type II curing compound, this time-consuming and labor-intensive process is no longer necessary.

A Competitive Advantage

Integrating HexiCrete PC 350 into pervious concrete mix designs has many potential benefits including:

- Achieve density with less compactive screed effort
- Improved workability
- Higher quality and lower installation costs
- Improved finished product permeability due to the optimization of interconnected voids
- Less sensitive to water content variation

The HexiCrete™ Difference

The HexiCrete brand is delivering the next generation of innovation to the concrete industry. HexiCrete products improve concrete performance, contractor productivity and the industry's environmental profile. When you see the HexiCrete mark, you can be assured of:

- Product testing and qualification in accordance with the most recent standards
- Coordination with local and governing associations on the product field requirements
- Assured supply
- Unmatched field service
